

# Eingabefelder definieren

*[formularFields]*

If the HTML-based version of the *Create support case* dialog is used, the input fields in this dialog will be defined as JSON string.

Description
<pre>&lt;configuration version="1.2.0"&gt;   &lt;applicationSettings&gt;      ...      &lt;!-- Input fields --&gt;     &lt;formularFields&gt;       [ {         "type": "textbox",         "id": "subject",         "caption": "Subject",         "validators": ["not-empty"]       },       {         "type": "textarea",         "id": "description",         "caption": "Description",         "rows": 6,         "autoGrow": true,         "validators": ["not-empty"],         "defaultValue": "\n\n\n\n\n\n\n\n\n\nKind regards\n{%ActiveDirectory. User.DisplayName%}"       }     ]   &lt;/formularFields&gt;      ...    &lt;/applicationSettings&gt; &lt;/configuration&gt;</pre>

The following input fields can be defined:

- Single line text field
- Multiline text field
- DropDown list
