

Eingabefelder definieren

[formularFields]

If the HTML-based version of the *Create support case* dialog is used, the input fields in this dialog will be defined as JSON string.

Description
<pre><configuration version="1.2.0"> <applicationSettings> ... <!-- Input fields --> <formularFields> [{ "type": "textbox", "id": "subject", "caption": "Subject", "validators": ["not-empty"] }, { "type": "textarea", "id": "description", "caption": "Description", "rows": 6, "autoGrow": true, "validators": ["not-empty"], "defaultValue": "\n\n\n\n\n\n\n\n\n\nKind regards\n{%ActiveDirectory. User.DisplayName%}" }] </formularFields> ... </applicationSettings> </configuration></pre>

The following input fields can be defined:

- Single line text field
- Multiline text field
- DropDown list
