

Skin-Datei bereitstellen

The appearance of the displayed messages can be customized. For this the *IBI-aws Client* needs a skin file.

A skin file can be deployed in two ways:

1. Automatic - the skin file must be located in the same directory as the `IBI.aws.Client.exe`
 - a. Main data source skin file name: `IBI.aws.Client.default.iacskin`
 - b. Additional data source skin file name: `IBI.aws.Client.additional.iacskin`
2. Start parameter
 - a. Main data source: [Skin](#)
 - b. Additional data source: [AdditionalSkin](#)

To apply the skin, running IBI-aws Client instances have to be [restarted](#).

If a skin file cannot be read—for example because the path indicated is not accessible—the default skin is used automatically.

 If you are interested in a skin, please contact us.
